DBMS LAB 1

DDL Demonstration: CREATE TABLE, ALTER TABLE, and DROP TABLE

SQL Program

```
-- DDL demonstration: CREATE TABLE, ALTER TABLE, and DROP TABLE
DROP TABLE IF EXISTS DDL_Demo;

CREATE TABLE DDL_Demo (
    Student_ID INT PRIMARY KEY,
    Student_Name VARCHAR(50)
);

ALTER TABLE DDL_Demo
ADD Age INT;

INSERT INTO DDL_Demo (Student_ID, Student_Name, Age) VALUES
(1, 'madhan', 20),
(2, 'rahul', 21),
(3, 'hemanth', 19),
(4, 'deeksha', 22),
(5, 'ramu', 20);

SELECT * FROM DDL_Demo;

DROP TABLE DDL_Demo;
```

Output

Output:

```
+------------+--------------+------+
| Student_ID | Student_Name | Age  |
+------------+--------------+------+
|          1 | madhan       |   20 |
|          2 | rahul        |   21 |
|          3 | hemanth      |   19 |
|          4 | deeksha      |   22 |
|          5 | ramu         |   20 |
+------------+--------------+------+
```

The program creates the table, adds the Age column, inserts five student records, displays them, and drops the table.
